Distribution and characterization of recrystallization inhibitor activity in plant and lichen species from the UK and maritime Antarctic.

Doucet C J; Byass L ; Elias L; Worrall D; Smallwood M ; Bowles D J

The Plant Laboratory, University of York, United Kingdom.

Cryobiology (UNITED STATES) May 2000, 40 (3) p218-27, ISSN 0011-2240 Journal Code: 0006252

Document type: Journal Article

Languages: ENGLISH

Main Citation Owner: NLM

Record type: Completed

Extracts from a range of evolutionarily diverse plant and lichen species from the UK and maritime Antarctic have been assayed for inhibition of ice recrystallization. Approximately 25% of overwintering UK species and all Antarctic species exhibited antifreeze activity when exposed to low temperature. Preliminary characterization of the active extracts has demonstrated that the molecules co-opted to antifreeze activity by different species are biochemically diverse. Copyright 2000 Academic Press.

AU 200146533 A C07K-014/41 Based on patent WO 200183534

Abstract (Basic): WO 200183534 A1

NOVELTY - An antifreeze protein which is derived from the lichen Nephroma arcticum, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) a nucleic sequence (II) encoding an antifreeze protein (I);
- (2) a vector (III) comprising nucleic acid sequence (II);
- (3) a method (IV) for producing an antifreeze protein (AFP) (I), comprising:
 - (i) harvesting *Nephroma arcticum* from the wild; and
 - (ii) preparing a protein-containing extract from the material of step (i), (the extract exhibits AFP activity);
- (4) a genetically modified organism (V), containing the nucleic acid sequence (II);
- (5) a protein-containing extract (VI) exhibiting AFP activity, prepared by (III) (the extract is suitable for use as a food additive); and
- (6) a food product (VII) comprising (VI).

USE - The antifreeze is useful as a food additive for altering the freezing characteristics of foods, especially frozen confectionery products (claimed).

Abstract (Basic): WO 9937673 A2

NOVELTY - A novel antifreeze protein (AFP) obtained from Lichen
is disclosed

DETAILED DESCRIPTION - A novel AFP which can be derived from
Lichen comprises an apparent mol. wt. of 20-28kD and has an N-terminal
amino acid sequence which shows at least 80% overlap with:
A-P-A-W-M-D-A-E-S-F-G-A-I-A-H-G-G-L (I); and modified versions and
isoforms of this protein.

INDEPENDENT CLAIMS are also included for:

(1) A nucleic acid sequence encoding an antifreeze protein as
above; and

(2) A food product containing the antifreeze protein.

USE - The AFP can conveniently be used in food products, preferably
in food products which are frozen or intended to be frozen. Especially
preferred is the use of AFPs in products which are heated e.g. by
pasteurization or sterilization prior to freezing and in frozen
confectionery products.

ADVANTAGE - Using the AFP ingredient, mixes can be frozen under
quiescent conditions, e.g. in a shop or home freezer without the
formation of unacceptable ice crystal shapes and hence with a texture
different to products normally obtained via quiescent freezing.
